Rapport technique - Test ADRIA ENSET

Candidat: ALOUANE Ayoub

B) Architecture Spring Cloud: Eureka, Config, Gateway,
account-service, transaction-service, notification-service,
ai-assistant, frontend React. Couches domain/repository/
service/web.rest/web.graphql/mcp. Voir docs/architecture.md

C) Account + Transaction (REST/GraphQL/MCP).
Regles: montant>0 et <=1000, compte ACTIVE, devise OK,
solde consulte puis debite, virement /api/transfers.
Feign + Resilience4J entre TX et Account.

D) Config Server: bank.transaction.max-amount=1000

E) AI assistant MCP tools + REST/Telegram clients.
LLM si OPENAI_API_KEY sinon mode regles.

F) Kafka topic bank.transactions.created (key=accountId).
notification-service journalise sans modifier les donnees.

G) Client React Vite AdriaLedger (comptes/TX/virement/chat).

H) Fraude ML (fraud_detection.py): 5000 rows, 5.14% fraude,
split stratifie, pipeline impute/encode/scale, seuil sur train,
logistic regression, precision/recall/F1/AP + confusion matrix.
Sorties: fraud-detection/outputs/

I) Docker Compose + GH Actions CI/CD (compile/test/image/deploy).
Secrets vs config; probes; observabilite; rollback SHA.

Lancement: docker compose up --build

Docs: docs/RAPPORT.md + RAPPORT_COMPLET.md + devops-answers.md
